Radio Club Organized; More Than 100 Join

More than 100 students have joined the recently organized MSOE Amateur Radio Club, which held its first meeting on February 25 at the school, under the sponsorship of Reid Burrows, instructor in electronics and faculty adviser.

The club will have as its headquarters the former school carpentry building which has been converted into a "ham shack" by the administration of the school. A transmitter in the shack will soon be ready for use. All students who are interested in amateur radio are eligible for membership, according to Burrows.

Officers of the group are Lester A. Peterson, president; Logan J. Hines, vice president; Elton V. Stolberg, secretary, and George K. Oister, treasurer.

A number of students are attending code classes sponsored by the club. One of the prime functions of the organization is to supply facilities and opportunity for code practice for those students who hold amateur radio operator licenses, and also for those interested in completing the requirements necessary for a license.
